ACCELERATING A DUAL-SOURCE STRATEGY TO **PROTECT MEDICINE SUPPLY**

SCENARIO

Following widespread supply chain disruptions, a global pharmaceutical company sought to reduce reliance on a single resin supplier by establishing a dual-source strategy. However, limited capacity and resources created a challenge in moving the program forward.

INNOVATION

Ecolab's Bioprocessing Applications Lab provided the additional lab capacity and technical expertise needed to accelerate the program, supporting tech transfer and conducting performance comparison studies of Purolite™ Resins across multiple molecule.

A cross-functional Ecolab team also provided regulatory guidance, helping **save six months** in regulatory filing time while reducing resin costs.
